PROJECT EXPERIENCE

1. CineStream – Full-Stack Movie Platform

Technologies: React.js, Node.js, Express.js, MongoDB, TMDB API, SCSS

- Developed a dynamic movie discovery application using the **MERN stack** and **Component-Based Architecture**.
- Integrated **TMDB API** for real-time data fetching, featuring trending content, user ratings, and detailed movie descriptions.
- Implemented **Asynchronous Programming** (async/await) to handle API requests efficiently without blocking the user interface.

2. DeepShield – Full-Stack Synthetic Media Detector

Technologies: Python, JavaScript, Docker, HTML5, CSS3

- Developed a **Full-Stack web tool** designed to analyze and identify synthetic or **AI-generated media artifacts**.
- Implemented a **Python-based backend** to process media analysis results and a JavaScript frontend for user interaction.
- **Containerized** the entire application using **Docker**, ensuring 100% environment consistency and reliable cross-platform deployment.

CERTIFICATIONS & CONFERENCES

- **IEEE IC2PCT-2024:** Presented research on **AI-driven Lung Cancer Detection** focusing on early-stage diagnostic analysis.
- **Full Stack Web Development Workshop – Softpro India Computer Technologies Pvt. Ltd.** (in collaboration with Dr. A.P.J. Abdul Kalam Technical University).
